

The E-Rate Program has enabled our school to maintain two computer labs, one which was recently upgraded. so that our students, who are predominately minority and on free and reduced lunch have the technological access that is necessary for them to have success in our educational system. The E-Rate program also allows fast internet access to over 550 students. This is going to be increasingly necessary as our school transitions to the Common Core assessments, which require a high degree of computer and internet literacy just to access the exam.
